ENERGY RESEARCH CENTRE

PROMOTING CLEAN ENERGY

PROFILE

ERC

About Us

Overview

The purpose of the National University of Lesotho (NUL) Energy Research Centre (ERC) is to respond to the energy and climate change challenges facing Lesotho by developing and/or adapting knowledge and technologies that enable smooth transition to a sustainable energy system. Furthermore, the ERC strives to develop human resource capacity in sustainable energy and to perform relevant research that informs national energy policy for sustainable development.

Vision

Be a leading national hub in energy efficiency and renewable energy studies, energy information management, and development-oriented activities.

Mission

To develop capacity in sustainable energy and renewable energy studies, conduct relevant RETs research geared towards social and economic development and provide scholarly expertise on energy matters through national energy policy advice, technical advisory services, training and community outreach pilot projects.

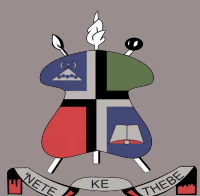

Our values

- **Excellence** - We promote excellence in all our activities.
- **Research** - We strive to do research that adds value and informs energy policies for sustainable development.
- **Collaboration** - We constantly collaborate with national and international energy stakeholders to ensure that all our activities are market driven, practice oriented and influence energy access policies.

We are unique

We offer flexible learning. Our MSc in Sustainable Energy programme is offered through block-release, for both full-time and part-time learning. We build entrepreneurial capacity by adopting a learner-to-do approach while also ensuring that our students receive a 360 degree exposure to energy access concepts.

What
Makes us
UNIQUE ?

Our Services

Research

ERC carries out all-inclusive low-carbon research work (solar, wind, hydro, bio-energy, etc.), social engineering (energy policy, economics, finance & project management, climate change & environment, etc.), capacity building (training) and outreach programmes.

Short Courses

Short courses are ideal to people who are only interested in certain modules but not the full MSc programme. In particular, it's meant for executives who just need a feel of a certain subject area.

Consultancy

The Centre offers professional and quality consultancy services across the broad spectrum of sustainable energy

MSc in Sustainable Energy

It provides high-calibre training, placing a strong emphasis on Sustainable Energy systems with due consideration of technical, environmental and socio economic issues.

Tailor made training

The Centre provides tailor made training upon request from individual organizations, locally and internationally

Community Outreach

ERC, in consultation with communities, carries out sustainable development projects including Clean Energy & Energy Access Awareness Campaigns.
